

Module 2: Navigating the Internet

In the **second module**, we explored the internet, and how you can use the internet to find information online.

We learned about: Wi-Fi and cellular data, internet browsers and search engines, and how to identify secure webpages.

Key Icons & Common Terms

Wi-Fi: A wireless connection that connects your device to the internet. You can access Wi-Fi at home or in public spaces. Public Wi-Fi is available in coffee shops, libraries, community centres, and other public settings. Public Wi-Fi is less secure than home Wi-Fi. **For personal things, like online banking or accessing your health information, use home Wi-Fi.**

Cellular Data: Connects you to the internet anywhere your phone has a signal (cellular service). Data comes from a phone plan that you purchase. **Data is limited, and best for quickly searching up something online.** Sometimes data might be spotty or slower when you are in rural areas.

Internet & Internet Browsers: The **internet** is a giant network of connected computers that share information world-wide. **Internet Browsers** let you open and look at webpages on the internet (like a door). Google Chrome and Apple Safari are common internet browsers.

Website Padlocks: When you visit a webpage, in the address bar, you might see a padlock. This means that the website is secure and your information is protected.

Module 2: Reflection Sheet

You explored how to access internet connection (Wi-Fi and Cellular Data) **and how to navigate the internet today.**

Keep on searching! The internet can be a great place to find relevant and helpful information, services, and resources.

Take a Moment to Reflect

Think about today's session and jot down your thoughts below. There are no right or wrong answers, this is your space to reflect on what you learned and think about how it felt.

What's one thing you learned today that felt new or surprising?

What's one thing you learned today that you want to practice more or learn more about?
